

CLIMATE CHANGE

*"Global warming isn't a prediction.
It is happening now."*

What is Climate Change?

Climate change refers to the changes between temperatures and weather patterns. It has a long-term effect. Pollutants generate greenhouse gas emissions such as carbon dioxide and methane into the atmosphere.

Effects of Climate Change

- Loss of different species
- Severe storms
- A warmer, rising ocean
- Lack of food
- Poverty and displacement
- Warmer temperatures around the globe

What Can We Do?

To prevent climate change we can...

- Reduce, reuse, repair & recycle
- Use wind or solar energy
- Throw away less food
- Avoid coal, oil, and gas
- Invest in energy-efficient Appliances

BE THE CHANGE.
